

RETAIL MARKET SURVEY ANALYSIS

PROJECT OVERVIEW

An Excel-based retail market research and data analysis project conducted to understand product availability, brand presence, pricing patterns, and market trends within the biscuit category.

The project involved primary data collection from retail shops in New Market, followed by data organization, preparation, analysis, and visualization using Microsoft Excel.

PROJECT CONTEXT

The project was based on first hand market research conducted by visiting retail stores and collecting information directly from the market. The collected data was structured and analysed to identify meaningful patterns in product availability, brand presence, pricing, and retail market performance.

ANALYTICAL WORKFLOW

Primary Data Collection
↓
Data Organization and Preparation
↓
Data Analysis using PivotTables
↓
Dashboard Development
↓
Business Insights

KEY PROJECT COMPONENTS

- Primary retail market data collection
- Data organization and preparation
- Data cleaning and structuring
- PivotTable-based analysis
- Market trend analysis
- Product and brand comparison
- Excel dashboard development
- Business insight generation

TOOLS USED

Microsoft Excel

SKILLS DEMONSTRATED

Primary Data Collection | Data Cleaning | Data Organization | Data Analysis | PivotTables | Data Visualization | Dashboard Development | Market Research | Business Insight Generation

PROJECT OUTCOME

The project demonstrates the ability to independently collect real-world market data and transform it into structured analysis and visual insights using Microsoft Excel.
